

Avondale, Pa. Oct. 24, 2021

Qfix Alta™ - One Device, Multiple Clinical Setups

Qfix will be showcasing the versatility of its Alta Multipurpose Device during the 2021 ASTRO Annual Meeting taking place in Chicago, IL from October 24-26. While the all-in-one solution was first introduced virtually in 2020, this year's in-person meeting will allow attendees to see its full capabilities.

The homogeneous and low-attenuating properties of Alta make it an ideal solution for hypofractionated treatments. The Alta spine area is free from obstructions that can interfere with treatment beam paths and enables precise dose delivery.

Alta features a unique InfinityEdge™, which allows InfinityLock™ accessories to quickly and securely attach anywhere along the device. At only 12 pounds, it is lightweight and therapist-friendly for a variety of patient setups including Intracranial, Craniospinal, SRS, and SBRT. It is also compatible with X-ray and MRI modalities. Alta combines the functionality of multiple devices into one easy to use solution.

Please visit Qfix at ASTRO booth #517 to learn about this solution.
