Qfix Introduces BoS® Extra Small Masks to Assist in Challenging Setups for Smaller Patients

Qfix introduces BoS® Extra Small Masks, which are now available to assist in your challenging setups for smaller patients.

The new 21cm length with 3 attachment points on either side allows for easier installation and is ideal for smaller patients. As Pia Randers from the Danish Proton Center describes:

“The length of the BoS mask is perfect for fixation of the head [of smaller patients]. Before we had way too much material that did not have any purpose other than being in the way and making the mask harder to manage.”

The BoS Extra Small Masks come in 2.4mm Aquaplast RT™ Standard Perforation and 3.2mm Fibreplast® Standard Perforation to meet your immobilization needs.
