Qfix AirDrive Caddie™ is the Newest Addition to the Symphony® Portfolio for Patient Positioning, Transport, and Transfer Efficiency

Symphony AirShuttle™ and AirDrive™ solutions enable a single patient setup and transfer from one modality to another.

Patient transfer can be a necessary, but often difficult task for medical professionals depending on the specific imaging and treatment needs for each individual. Using a Symphony solution, which combines an AirShuttle transfer device with an AirDrive source, allows medical professionals to safely transfer a patient without lifting or straining, all while maintaining proper positioning for imaging and treatment.

The AirDrive Caddie transfer technology powers AirShuttle transfer devices in imaging modalities including CT, X-Ray, ultrasound, fluoroscopy, MRI (up to 3 Tesla), and radiation therapy environments including brachytherapy. This technology enables safe patient transfer, even over gaps and uneven surfaces. Medical professionals now have a compact AirDrive that provides optimum smooth transfer performance for most imaging and treatment applications.
